IT / Computing Internship — System & Network Administration, IT Operations, or Cybersecurity

SUMMARY

Computing student (System & Network Administration) at the University of West Georgia, completing coursework while working full time since 2019. Seeking a first formal IT role after four years in a technical position where I took on the team's tooling, reporting, and documentation work: built and maintained a SQL reporting suite against an Epicor P21 ERP, designed an order-tracking system adopted by ~20 team members, and handled export-control classification for regulated products. Home lab covers Windows Server, DNS filtering, firewall rules, and hands-on security testing. Available immediately.

EDUCATION

University of West Georgia — College of Mathematics, Computing & Science | Carrollton, GA

Nexus Degree, System & Network Administration — Expected Fall 2026

B.S. Computing, Concentration: System & Network Administration — Expected Fall 2027

Completed while working full time.

Relevant coursework: Networking & System Administration, Cybersecurity, Databases, Java, Python, Web Development, Cloud (AWS EC2), Linux Administration

Accessibility Note Taker — provided structured course notes supporting students with documented accommodations

TECHNICAL SKILLS

Networking & Infrastructure: TCP/IP, DNS, DHCP, firewall configuration, Windows Server, Linux (Debian/Ubuntu), macOS

Scripting & Programming: Python, Bash, SQL, JavaScript, Java

Databases & Systems: SQL, relational data modeling, MySQL, ERP (Epicor P21)

Security: Packet capture, RFID/NFC clone & emulation, IR replay simulation, brute-force simulation (controlled lab targets), OAuth/role-based authentication

Tools & Hardware: Git, Pi-hole, Ollama, Raspberry Pi, ESP32, Flipper Zero, PC build/repair

EXPERIENCE

Control Equipment Company — Marietta, GA

Technical Sales Specialist (*promoted from Inside Sales within 9 months*) | Jan 2023 – Jul 2026

- Wrote and maintained a recurring SQL reporting suite against Epicor P21 — 3 weekly, 2 monthly, and 4 quarterly reports plus ad hoc requests — covering order, inventory, and RMA tracking; documented the process and used it to cover two staff transitions
- Built a structured order-tracking and knowledge system (Obsidian with Dataview queries and Templater automation) that tied full vendor part numbers to specifications, serialized custom-assembled units, and linked project files from the network drive — solved field-length and linking limits in the legacy CRM and was adopted by ~20 team members
- Automated generation of structured import files for the Epicor P21 ERP, cutting a daily ~90-minute data-entry task to under five minutes

- Classified products and vetted end users and end uses for **export compliance** (ECCN, HTS, CSA, and CRN codes) on internationally shipped equipment
- Wrote standard operating procedures for specification, quoting, and order processing, and designed the folder structure and naming standards for the company file server
- Deployed Microsoft PowerToys across the team and built date-stamping and serialization templates for vendor Excel programs; assisted in rollout and training for Esker AI invoice automation

CameraOn Studios — Carrollton, GA

Co-Founder & Technical Lead | Aug 2020 – Dec 2022

- Migrated an engineering firm's web hosting from GoDaddy to a client-owned on-premises Windows Server over an 18-month engagement; configured DNS and web server settings and implemented a local-plus-offsite backup strategy
- Migrated the client site from RapidWeaver to hand-maintained HTML, eliminating a recurring subscription cost; built a custom HTML login portal for client access
- Produced and optimized photo and video content for web delivery to reduce page load times

Simply Mac — Marietta, GA

Apple Repair Technician & Sales Associate | Jun 2018 – Aug 2020

- Apple GSX certified; diagnosed and repaired iMacs, MacBooks, iPhones, and iPods while maintaining a top-performing sales record

PROJECTS & HOME LAB

- **Windows Server home lab** — hosts multiple services; Pi-hole DNS sinkhole, custom firewall rules, permissions scripting, network routing, and hardware assembly
- **Self-hosted LLM interface** — LLaMA served via Ollama behind a custom HTML/CSS/JS frontend; full stack from infrastructure to UI
- **Discord OAuth / API integration** — role-based authentication controlling access to a self-managed game server
- **Employee Management System** — Java, JavaFX, and JUnit test coverage
- **Retail Database Schema** — MySQL; normalized relational design with query workload
- **Security & network coursework** — RFID clone and emulation, IR replay simulation, packet capture and brute-force simulation against a controlled ESP32 target
- **Systems utilities (Python)** — Linux permissions converter, IP address/binary converter, OSI model reference tool, Caesar cipher

CERTIFICATIONS

Apple GSX Certified

CompTIA Security+ — *[exam scheduled, 2026-08-20]*
